SUMMARY

AI & HPC young professional, seeking an internship in machine learning, with interest in full-time opportunities. Strong background in **distributed deep learning**, **HPC environments**, **GPU benchmarking** on supercomputing systems. Experienced in **building and benchmarking end-to-end ML pipelines**, with a particular focus on **scalability**, **efficiency**, and **real-world deployment**. Interested in applying state-of-the-art machine learning techniques to complex, data-driven problems.

WORK EXPERIENCE

Research Analyst Intern – Flatiron Institute / Simons Foundation October 2025 – Present New York, NY

- **Independently designed and deployed an end-to-end platform for scientific AI model inference and web visualization** on Kubernetes, integrating multiple services (frontend, gateway, media processing, inference).
- **Developed, automated and benchmarked LLM training and inference performance** across multiple NVIDIA and AMD GPU architectures (PCIe vs SXM), informing hardware selection and optimization strategies.
- Work selected for presentation at **DP2E-AI** - International workshop on distributing large-scale AI systems

Assistant Software Engineer Intern – IDRIS / CNRS France August 2023 – January 2024 Paris, France

- **Implemented and benchmarked distributed deep learning strategies** on a large-scale multi-node GPU cluster to support researchers in fine-tuning LLMs and to inform the design of next-generation AI clusters.
- Contributed to the **development of an internal LLM-based assistant** combining fine-tuning and retrieval-augmented generation (RAG) to support users on using the cluster.

SKILLS

- Machine Learning & Deep Learning: **PyTorch**, **Transformers**, **Distributed Training** (DDP, FSDP), vLLM, TensorRT-LLM, Quantization, Hyperparameter Optimization, Data Augmentation, RAG
- Performance & Distributed Systems: Nvidia systems (Cuda Toolkit) and architectures (SXM, PCIe), large-scale ML
- Programming: **Python**, C/C++, Bash, Git, Web (React, JS, CSS)
- Systems & Infrastructure: Linux, Slurm, Docker, Kubernetes

AWARDS

2nd Place – CONFORMiT Hackathon (AI Chatbot) 2025 Chicoutimi, QC, Canada

- \$1,000 prize for a **chatbot** using **RAG** on a **cloud server**, connected to a **web interface**.
- **Collaborated with teammates** to design a user-friendly interface and ensure scalable cloud deployment.

1st Place – Scientific Game Jam (3D Game Project) 2023 Belfort, 90, France

- **Collaborated** on the development of a game, delivering a complete prototype **under tight time constraints**.

EDUCATION

Dual-degree program:

- University of Technology of Belfort-Montbéliard (UTBM) 2020 – November 2026 Belfort, France
Master's degree in engineering in Computer Science, specialized in **AI & Computer Vision**.
- University Of Quebec at Chicoutimi (UQAC) 2024 – May 2026 Chicoutimi, Canada
Master's degree in Computer Science, specialized in **AI**.
